

Learning About Your Favorite Local Native Plants Using Calflora

Thursday December 3rd at 6 pm

RSVP to sprpt@calflora.org or use this [RSVP survey](#)

Calflora is a 501(c)3 wild plant digital resource for California. Calflora's plant database serves over 3 million plant occurrences. CNPS Chapter members are an extremely valuable source of plant distribution data in Calflora, including your observations and plant lists / surveys.

Cynthia Powell, Calflora's Executive Director will go over how to use Calflora to learn about your regional plants, Calflora's photo project, iNaturalist data feed, population monitoring tools, and soil / water / climate tolerances for specific plants. To prepare for the session, before December 3rd please try [Calflora's Planting Guide](#) to see which native plants will grow best at a specific location. Your feedback will be valuable and provide great discussion.

This free event is open to non-CNPS members. Please RSVP to sprpt@calflora.org or use this [RSVP survey](#). Zoom link to this virtual meeting or phone number for audio only are below.

Cynthia Powell's many hats, and now a mask:

Cynthia became Calflora's Executive Director in 2016. She graduated with her MS in GIS (Geographic Information Science and databases) forecasting Mokelumne River water supply based on MODIS remote sensing snow pack images. She's been examining under

that snow — plants — ever since. Here is [Cynthia's native plant observations portfolio](#); feedback welcome. She coordinates all Calflora programs, research, outreach, and advocacy, as well as fundraising and project management.
